Thousands of ITT engineers are "space men"

NOT literally, of course, but they are engaged in so many electronic activities associated with the vast air world above us that they might well be broadly identified as "space men."

Many have achieved a high record of success in research, design, production, testing, and field engineering of air navigation and traffic control systems... including ILS, Tacan, Vortac, Data Link, VOR, DME, Navascreen, Navarho, and automatic "typewriters" serving the Narcast system for in-flight weather reporting.

Other ITT "space men" are making important contributions to air reconnaissance, inertial navigation, infrared, missile guidance and control, electronic countermeasures, radio communications, radar, scatter communications, and other categories vital to national defense.

These are only a few of the many activities at ITT laboratory and production centers—coast to coast—where challenging problems are constantly opening the way to top careers.

To learn more about the opportunities at one of America's great and growing electronic enterprises, write to ITT Technical Placement Office, 67 Broad Street, New York 4, New York.
